NFA:	5.275 m ²

covering the bottom of the stairs to reduce the fire load

our work

The fire protection of the office building is being comprehensively improved.

For this purpose, the building is divided into sections of 400 sqm using fire resistance class F90. All staircase walls are upgraded in F90, the doors are expanded as required and equipped with open brackets. Existing fire loads in the stairwells are removed. The wooden staircase in the oldest part of the building is covered with fire protection class A on the underside.
