

conversion and modernisation  
**Apartment building, Bonn**

**the project**

The 19th century building is located in Bonn's Weststadt. Reconstruction and modernization measures are planned.

**project data**

client:	private client
location:	Bonn
building type:	residential buildings
services:	conversion and modernisation
area:	residential
scope of services:	HOAI service phases 1-9
completion:	2011
period:	10/2008 - 05/2011

conversion and modernisation, apartment building, Bonn

wooden stairs

**our work**

The division of the house into 2 residential units is retained when the building is renovated. The apartment on the ground floor will be approx. 80 m<sup>2</sup> in size, the second apartment will extend as a maisonette apartment with approx. 130 m<sup>2</sup> of living space over the 1st floor and the attic.

The planned construction measures lead to an energetic improvement of the building. This includes insulating the historically irrelevant facades to the inner courtyard, improving the roof by increasing the rafters and insulation, and installing new windows.

Inside the building, rooms are merged and new bathrooms installed. A balcony is added to the building on the upper floor facing the inner courtyard. A terrace is planned on the ground floor.

Furthermore, fire protection and escape route measures are implemented in accordance with the requirements of the fire service.
